Huynh Gia Bao

0936 993 764 | Huynhgiabao541@gmail.com | huynh-gia-bao.vercel.app | Thu Duc, TP.HCM

Education

FPT University 10/2023 – 11/2026 (expected graduation)
B.Sc. Software Engineering | ***GPA: 7.1/10*** *TP.HCM*

Skills

Backend: .NET Core (C#), Node.js (TypeScript), RESTful API, EF Core, Prisma, CQRS, Clean Architecture

Business Analysis: Requirement elicitation, business process analysis, user roles & workflows, ERD / database design, translating requirements into features

Databases & DevOps: SQL Server, PostgreSQL, MySQL, Docker, Jenkins CI/CD

Experience

T.A Technical Consulting Co., Ltd. 04/2025 – 08/2026
Backend / Frontend Developer *TP.HCM*

Tech stack: Node.js (TypeScript), .NET Core, React, PostgreSQL, GraphQL (Hasura), AWS S3, Firebase, Docker

- Took over **Task24h**, a live retail management platform: fixed bugs and shipped change requests across React/Node.js/Hasura, and optimized slow queries, cutting query latency from **18,000 ms to 3,000 ms**.
- Acted as **Business Analyst & Backend Developer** on the **traffic infrastructure incident & repair system** (Cau Pha): analyzed the field-inspection and repair-tracking process, defined requirements and user roles, and modeled them into a **PostgreSQL schema** (Incidents, Task Items) with Prisma.
- Implemented the data model end-to-end as production backend features (Node.js/TypeScript, Hapi.js): incident reporting, repair progress tracking, role-based access (JWT), file storage (AWS S3) and PDF/Excel/Word report export, replacing manual field reports for **100+ inspectors/users**.
- Applied Clean Architecture and CQRS; moved report generation to background jobs so requests no longer block, reducing API response time from **3,500 ms to 45 ms**.

Amazing Technology Solutions Co., Ltd. 12/2024 – 04/2025
Backend Intern *TP.HCM*

Tech stack: .NET Core, Microservices, Clean Architecture, SQL Server

- Worked on a production & QA/QC management system for a garment factory: implemented microservice endpoints and tuned SQL for real-time data, replacing manual tracking for **100+ production lines/users**.

Projects

Library Management System (live) thuvienxaloiphat.vn

Tech stack: .NET 10, EF Core, CQRS, FluentValidation, Hangfire, SQL Server

- Built the backend for borrowing/returning workflows for a religious organization's library, serving **1,000+ books and 100+ members**.
- Used Hangfire to auto-update loan status and flag overdue books daily, removing the manual check.

Rhymo – Music Learning Game (backend) Personal / academic project

Tech stack: .NET Core, Clean Architecture, Groq API (LLM), Docker, Jenkins CI/CD

- Built an **LLM pipeline (Groq)** to auto-generate multiple-choice / multi-select questions, with rate limiting to stay within API quotas; cut question authoring time from **15–20 min to under 2 min**.
- Containerized with Docker and automated build/deploy with Jenkins CI/CD.

SEAL – Academic Event & Competition Management Team project, Project Leader

Tech stack: .NET Core, CQRS (MediatR), SQL Server

- Led a team of **5 developers**: designed the database for multi-role tournament flows, ran code reviews, and delivered the registration-to-appeal workflow for **12+ schools** and **800+ users**.

AI in Development

- Use Claude and Gemini for writing unit tests and refactoring, cutting time spent on these tasks by about **75%**.
